A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

Flex
Monitoring
Team

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

Overview

- Health system development performance expectations
- State role in supporting regional systems of care
- Examples of regional STEMI systems of care:
 - Regional models of STEMI care
 - Role of EMS
 - Role of CAHs
 - State Flex support for development of these systems of care
- Needs assessment and community benefit opportunities
- FMT Resources

Health System Development & Community Engagement (HSD/CE)

- 3rd core area of Flex activity - limited to 1/3rd of award
- Flex Programs are required to support CAHs in:
 - Developing collaborative regional or local systems of care across the continuum of care;
 - Addressing community needs; and/or
 - Integrating EMS in those regional and local systems of care.
- Logic:
 - CAHs cannot be viable without community support
 - CAHs are hubs of local service systems
 - Maximize and rationalize use of scarce local resources
 - Improve functioning of local system of care

A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

Monitoring
Team**

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

HSD/CE Objectives

- Work plan must include at least one of the following:
 1. Support CAHs, communities, other hospitals, EMS, community providers in developing local/regional systems of care
 2. Support inclusion of EMS into local/regional systems of care and/or regional/state trauma systems.
 3. Support CAH/community collaboration on assessments to identify unmet community health needs
 4. Support CAH/community collaboration on projects/initiatives addressing unmet health needs
 5. Support sustainability/viability of EMS within the community (optional)

A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

Monitoring
Team**

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

HSD/CE Evaluative Measures

- Create a baseline to determine impact of activities that lead to the development of appropriate interventions
- Utilize one of identified activities and related activities to assist ORHP in the creation of a comparative data set
- Monitor short term processes leading to medium/long term outcomes
- Monitor and support change at the community/systems level

A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

**Flex
Monitoring
Team**

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

Evaluative Measures: 1 & 2

- Support for CAH/EMS involvement in regional systems of care
 - # of CAHs engaged in regional STEMI, stroke, or trauma systems
 - # of STEMI patients
 - # of STEMI patients receiving aspirin within 24 hours
 - # of STEMI patients with D2B times of 90 minutes or less
 - # of regional systems of care involving rural providers
 - # of CAHs receiving trauma designation (# rated Levels III, IV, V)
 - # of CAHs that enhanced their trauma designation

A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

**Flex
Monitoring
Team**

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

Evaluative Measures: 1 & 5

- EMS operational and financial performance improvement
 - # of EMS units participating in activities to improve EMS
 - # of units engaged in group purchasing arrangement
 - # of personnel participating in billing/coding programs
 - # of EMS units showing a positive change in revenue
 - # of personnel participating in leadership development
 - # of units participating in recruitment/retention activities
 - # of EMS vacancies filled
 - # of personnel reporting participation in recruitment activities was valuable
 - # of units that changed procedures based on recruitment activities

A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

Flex
Monitoring
Team

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

Evaluative Measures: 3 & 4

- Support CAHs in conducting/implementing CHNAs
 - # of CAHs receiving support/TA to conduct CHNA
 - # of CAHs completing CHNA and strategies to address identified needs
 - # of community providers/agencies collaborating on CHNA
 - # of interventions developed in response to results of CHNA
 - # of intervention to address new/ongoing community needs
 - # of individuals in target population served by these interventions
 - # of CAHs reporting improvement in conditions in subsequent CHNA
 - # of community paramedicine programs identified as a potential intervention based on CHNA
 - # of communities piloting community paramedicine programs

A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

**Flex
Monitoring
Team**

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

Scope of Problem: STEMI

- ST-elevation myocardial infarction (STEMI)
- US - 400,000-500,000 STEMI events annually
- 30% of all patients with acute coronary syndrome
- Characterized by blocked artery/high risk of death or disability
- Critical need for rapid reperfusion
 - Percutaneous coronary intervention (balloon angioplasty)
 - Fibrinolytics (clot busting drugs)

A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

**Flex
Monitoring
Team**

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

System Failure

- STEMI treatment is “primarily a systems problem of local communities”
- **Time is muscle!**
- 30% of patients do not receive PCI or fibrinolysis in the absence of contraindications to their use
- Fewer than 50% of fibrinolysis patients and 40% of PCI patients are treated within guidelines
- 70% of patients ineligible for fibrinolytics do not receive PCI

A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

Flex
Monitoring
Team

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

AHA Mission: Lifeline Guidelines

- Improve STEMI care by defining components of the system and how they should work together
- Defines capacities of “ideal” EMS, STEMI referral, and STEMI receiving hospitals
- Maintains a role for non-PCI hospitals - **key in rural areas**
- Key aspects of system functioning:
 - Multi-disciplinary team meetings to evaluate outcomes and QI data
 - Process for prehospital identification and activation (EMS)
 - Destination protocols for STEMI receiving hospitals
 - Referral hospital transfer protocols

A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

**Flex
Monitoring
Team**

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

Barriers to Timely Reperfusion

- Patients fail to recognize symptoms or seek medical attention
- EMS system limitations
- Long travel distances
- Delays at STEMI referral (non-PCI) hospitals related to diagnosis, transport and/or treatment
- Delays at PCI hospitals in processing and treating patients

STAT Heart Program

- Rural Illinois
 - 6 referring hospitals, 2 receiving hospitals, large CV specialty group
 - Identified time delays in process of care:
 - 32-65 minute time in STEMI referral hospital
 - Door 1 – Door 2 travel time ranged between 61-95 minutes
 - Door 2 to balloon 31-39 minutes
 - Median door 1 to balloon was 117 minutes
 - Greatest source of delay–waiting for transport at STEMI referral hospital
 - Demonstrates feasibility of initiating various reperfusion strategies on basis of standardized POE algorithm

University of Southern Maine

Spectrum Health Reed City Hospital

- STEMI performance improvement project
 - CAH in the rural lower peninsula of Michigan
 - Part of Spectrum Health in Grand Rapids and the Meijer Heart Center
 - Travel time 70 minutes by ground, 25 minutes by air (70 miles)
 - Team - Reed City, 2 EMS agencies, Meijer, Aeromed, Spectrum Health
 - D2B time averaged 120 minutes
 - Barriers to achieving 90 minute D2B times
 - Lack of 12 lead ECG capability in one EMS agency
 - Long travel distance with delays caused by weather conditions
 - Delays in mobilizing Aeromed services
 - Results: D2B times within 90 minutes with some as low as 56-60 minutes

SH Reed City (continued)

- Team developed/implemented the following:
 - AMI bag containing drugs, IV fluids, and supplies was created
 - ED staff trained to perform 12 lead ECGs
 - Standardized order set to evaluate and treat AMI/STEMI patients
 - County equipped all ambulances with 12 lead ECGs
 - Reed City provided 12 lead ECG interpretation classes for paramedics
 - Aeromed and cath lab activation based on prehospital ECGs
 - Nurse/physician meet EMS at hospital prior to Aeromed rendezvous
 - Nurse brings AMI bag to landing pad and administers meds under orders
 - All hospital and EMS staff educated on new STEMI protocols

Monitoring
Team

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

Washington's AMI/STEMI Initiative

- Project of Rural Healthcare Quality Network (funded by Flex)
 - Ongoing initiative for Washington's 34 CAHs
 - Standardized protocols, standing orders, data tools, and education materials
 - TA and support, assistance with data collection/analysis
 - Disseminated information on best practices for AMI/STEMI care
 - Worked with DOH, ECS Work Group, and ACC to develop protocols and standards for two levels of cardiac centers
 - Works with CAHs, PCI hospitals, and EMS to implement Level 1 protocols
 - Convenes regional and state meetings with key stakeholders
 - Publishes quality newsletters for CAHs
 - Door to transport times dropped from 197 to 100 minutes
 - Door to ECG goal of 2 minutes improved from 62% to 81% of patients

A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

Monitoring
Team**

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

Illinois Rural STEMI Activities

- Illinois Critical Access Hospital Network (ICAHN)
 - Supports CAH and rural EMS participation in regional STEMI systems
 - Assist CAHs/EMS to develop/implement standardized TX protocols and algorithms, standing orders, clinical/reperfusion pathways, transport protocols
 - Encourage development of data collection and QI systems to support multidisciplinary STEMI teams
 - Implement processes to monitor STEMI care provided by EMS
 - Conduct needs assessment to assess gaps and needs
 - Support collaboration by attending meetings and developing relationships
 - Organize professional education resources
 - Develop community awareness program

A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

**Flex
Monitoring
Team**

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

State Flex Activities Supporting STEMI Systems

- Engage policymakers/statewide coalitions of STEMI providers
- Facilitate development of local and regional coalitions
- Support EMS and hospital training
- Support STEMI Systems of Care involving CAHs
- Support development of hospital and EMS standardized tools, treatment and transport protocols, data collection, etc.
- Disseminate information on best practices and successful STEMI initiatives

A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

**Flex
Monitoring
Team**

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

Other Opportunities to Support Regional Systems of Care

- Support participation in regional or national stroke programs
- Support CAHs in participating in regional or statewide trauma care systems and obtain appropriate trauma designation
- Support development of regional EMS provider systems including those for the provision of medical direction, financial and business services, quality/patient safety management, or recruitment and retention
- Support the development of regional systems of care to serve uninsured and other vulnerable populations

A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

**Flex
Monitoring
Team**

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

CHNA Opportunities

- Support development of collaborative CHNAs
- CHNA needs of different providers:
 - 501(c)3 hospitals required to conduct CHNAs every three years
 - Public health departments/agencies seeking voluntary accreditation are required to conduct periodic CHNAs
 - FQHCs conduct CHNAs to support their activities
 - Many other local providers conduct needs assessments
- Support collaborative development of initiatives/interventions to address needs identified in the assessment process

A Performance Monitoring Resource for
Critical Access Hospitals, States, and Communities

**Flex
Monitoring
Team**

University of Minnesota
University of North Carolina at Chapel Hill
University of Southern Maine

Collaborative CHNA Activities

- Collaborative CHNA Activities
 - Developing CHNA framework
 - Collaborating on collecting and analyzing data
 - Engaging key stakeholders
 - Identifying and prioritizing needs
 - Developing strategies to address needs
- Develop interventions to address identified community needs
 - Child obesity prevention and fitness programs
 - Diabetes programs
 - System to provide primary care access to uninsured residents
 - Development of mental health and substance abuse services

FMT Resources

- FMT Website: <http://flexmonitoring.org>
- Policy briefs, papers, and presentations on core area issues
- National and state data on CAH quality, finances, community engagement and benefits, HIT implementation
- Tools to support program evaluation (logic models, state performance) and program planning
 - Toolkit: <http://www.flexmonitoring.org/documents/PLMToolkit.pdf>
- Overview of state activities across the 45 participating states
- Speakers, TA, contacts and connections across core areas
